Invalid Adhoc Ticket	Date: 22/09/2017

Test Name	<a href="#">Invalid</a> Adhoc Ticket			
Use Case Tested:	<a href="#">Pay for Ticket</a>			
Test Description:	<a href="#">A customer passes a casual (a.k.a. 'Adhoc') ticket to the paystation, etc. however the barcode is invalid.</a>			
Pre-conditions	<a href="#">The car park is open for business and someone intends to pay for their casual carpark ticket.</a>			
Post-conditions	<a href="#">An invalid ticket message has been displayed.</a>			
Notes:	<b>The paystation ui is launched from the IDE.</b>			
Result (Pass/Fail/Warning/Incomplete)				
	TEST STEP	EXPECTED TEST RESULTS	P	F
1.	An 'issued' ticket that is not an 'in use' (a.k.a. 'current') ticket is inserted by driver.	System rejects the ticket.		<b>F</b>

Invalid Adhoc Ticket	Date: 22/09/2017

Test Item		Description	Result
1.	Ticket Number: 1 DateString:22092017060633 A-1- FEFF00320032003000390032003000310037003000360030003600330033	This data was copied and then pasted into the ui barcode reader after the ticket was issued but the status was 'issued' not 'current'.	Fail

The paystation did not display a message "Go to the office" or reject the ticket. The code fails at:

Exception in thread "AWT-EventQueue-0" java.lang.ArithmeticException: Non-terminating decimal expansion; no exact representable decimal result.
